Patent No. 6517839

GENERAL INFORMATION

APPLICANT: Modlin, Robert L.

APPLICANT: Libraty, Daniel H.

TITLE OF INVENTION: WETHOOS FOR INDUCING INTERLEUKING-12 AND A TYPE 1/TH1

TITLE OF INVENTION: T-CELL RESPONSE

FILE REPERENCE: 30435-44501

CURRENT APPLICATION NUMBER: US/09/118,426C

CURRENT APPLICATION NUMBER: 60/052,970

BARLIER PLING DATE: 1998-07-17

NUMBER OF SEQ ID NOS: 14

SOFTWARE: Patentin Ver. 2.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 2, Application US/09819993
Sequence 2. Application US/09819993
Patent No. 6436692
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: ISOLATED HUMAN ENZYME PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN ENZYME PROTEINS, AND USES
TITLE OF INVENTION: THEREOF
FILE REPERENCE: CLOO1195
CURRENT APPLICATION NUMBER: US/09/819,993
CURRENT FILING DATE: 2001-03-29
NUMBER OF SEQ ID NOS: 5
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                   GENERAL INFORMATION:

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 893, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: Griffais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragmente
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: base of the sequence of the seque
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 23917, Application US/0925291A

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Description

Fatent No. 6328978

General No. 6328978

GENERAL INPORMATION:

APPLICANT: Wateon, James D.

APPLICANT: Tan, Paul L.J.

APPLICANT: Tan, Paul L.J.

APPLICANT: Prestidge, Ross

TITLE OF INVENTION: Methods and Compounds for the Treatment

TITLE OF INVENTION: Of Immunologically-Mediated Skin Disorders

TITLE OF INVENTION: Of Immunologically-Mediated Skin Disorders

TITLE OF INVENTION: Of Immunologically-Mediated Skin Disorders

TITLE OF INVENTION: Of Immunologically-Mediated Skin Disorders

TITLE OF INVENTION: Of Immunologically-Mediated Skin Disorders

TITLE OF INVENTION: Of Immunologically-Mediated Skin Disorders
